Dynamic Earth
GEOL1500

Fulfills Gen Ed Natural Science requirement

Ever wonder why we have both mountains and a seashore in NC? Or why the Appalachians are not as tall as the Rockies? Come find out!

Consider enrolling in GEOL1500 and GEOL1501 this summer and next fall to fulfill your Gen Ed Natural Science requirement and explore how mountains are built, what makes up the rock beneath your feet, why are some beaches rocky (like the picture above) and some beaches sandy like in NC? Discover the mysteries of our planet through topics like geologic materials (rocks and minerals), mountain highs and ocean lows, faults and folds, geologic hazards like earthquakes and volcanoes, and other geologic processes like plate tectonics, weathering and erosion, sedimentation, glaciation, and mountain-building!

GEOL1501 enhances your experience by applying knowledge from GEOL 1500 to further study geologic materials and processes through interactive, hands-on exercises.

Summer 2021 Offerings for GEOL 1500 (lecture)
SS1 DE  CRN 40460  Dr. Manda  Online
SS2 DE  CRN 60260  Dr. Blome  Online

Fall 2021 Offerings for GEOL 1501 (lab)
Wide variety of in-person offerings
Midday, Afternoon, and Evenings
CRNs: 80417-80434

Students may take the lecture as a stand-alone class. The lecture is a pre- or co-requisite for taking the lab.
