Ever been to the ocean? Amazing isn’t it? Want to learn its secrets?

Consider enrolling in **GEOL1550** and **GEOL1551** this summer and next fall to fulfill your Gen Ed Natural Science requirement and explore the wonders of the geological, biological, chemical, and physical characteristics of the oceans, and the interaction between people and the ocean. Discover the mysteries of the ocean through topics like plate tectonics, marine provinces and sediment, ocean life, sea-air interaction, circulation patterns, waves, tides and storms, coastal systems, and human impact on the oceans.

GEOL1551 enhances your experience by applying knowledge from GEOL 1550 to further study ocean characteristics and processes through interactive, hands-on exercises.
